Professional Profile

Informatics Engineering graduate from PUCP with experience in full-stack development, hospital systems and healthcare interoperability. At PUCP / GIDIS, I developed SIH.SALUS admissions workflows and an HL7 FHIR / IPS interoperability module for RENHICE. I deliver web platforms, APIs and internal systems from requirements to deployment, training and maintenance, including environments with limited connectivity.

Professional Experience

Software Developer – Health Systems *August 2025 – October 2026*

PUCP / GIDIS – SIH.SALUS *Hybrid, Lima*

- Development and implementation of the electronic health record system for Hospital Santa Clotilde with PUCP's Software Engineering Research and Development Group (GIDIS). Responsible for the admissions module and integration of healthcare interoperability standards.
- On-site deployment in August 2026 in Santa Clotilde, Napo River basin: admissions, triage, pharmacy, laboratory and outpatient consultation. Transported and installed the server and a UPS with the team in a hospital with unstable power and connectivity.
- Personally trained admissions staff, followed up on system use and delivered improvements after deployment.

Software Engineer (Freelance) *November 2024 – Present*

Full Stack Developer – End-to-end project management *Lima, Perú*

- Self-managed end-to-end delivery: requirements analysis, technical design, full-stack development, deployment on client VPS/hosting, client training, and ongoing maintenance.
- Development of Next.js frontends and Supabase/PostgreSQL and PHP/MySQL backends for commerce platforms, catalogs, admin panels and operational workflows with authentication and role-based access.
- Iterative feedback cycles, bug fixes, performance optimization, and post-launch feature enhancements.

Selected client projects:

- **Remake Comics** (Aug.–Sep. 2026) – Full-stack comic store development: customer accounts, orders, transactional inventory reservations, coupons and role-based administration. Next.js, TypeScript, Supabase, PostgreSQL.
- **Tortas Pieros** (Oct. 2026) – Frontend development of a catalog with 78 products, a persistent shopping bag, 16 stores and WhatsApp inquiries. Brand implementation, responsive images and static export. Next.js, React, TypeScript.
- **Grupo Sercom / Intranet** – B2B website and document portal with RUC-based access, PDF preview and private administration. Next.js, TypeScript, VPS, PM2.
- **Nebu** – Real-time voice/video, AI integrations and online payments. Remix, NestJS, PostgreSQL, Docker, LiveKit.
- **Automotriz Lévano ERP** – Private automotive business platform with authenticated team access. TypeScript, React, Next.js.

Additional projects: Prosedain, Iserma, Farmasalud Inversiones, MITS Perú, Academia Pásalo.

Healthcare Interoperability

Conectatón IPS Perú 2025 – Technical participation representing Hospital Santa Clotilde and PUCP in clinical information exchange using international health standards.

Thesis

SIH.SALUS – Healthcare Interoperability Module
Pontificia Universidad Católica del Perú *2025 – 2026*

- Interoperability module for OpenMRS integrated with RENHICE (Perú's National Electronic Health Records Registry) using HL7 FHIR.
- Mapping of OpenMRS clinical data to FHIR resources and IPS bundles, with clinical summary submission and bidirectional queries/imports.
- Persistent queues, deferred processing, retries and monitoring for intermittent connectivity; integration testing with HAPI FHIR.

OpenMRS 3 · Java · HL7 FHIR · Clinical interoperability My interoperability module

Academic Projects

Thesis Management System *March 2025 – July 2025*
React · Spring Boot · PostgreSQL
Capstone project with 38 team members. Developed the review module and GoWinston plagiarism detection integration; contributed to CI/CD, quality control and code reviews.

Logistics Operations Planning System *August 2024 – December 2024*
Java · React
Delivery route planning with constraints and blockages, a Java optimization engine and modular React interface.

Academic Tutoring Management System *March 2024 – July 2024*
React · ASP.NET
University tutoring platform with schedules, notifications and session management, developed using Scrum.

Banking Risk Management System *August 2023 – December 2023*
Java · C#
Academic banking risk prototype with registration, analysis, hierarchy and filtered reporting modules.

Education

Informatics Engineering (Coursework Completed) *2020 – 2026*
Pontificia Universidad Católica del Perú (PUCP) *Lima, Perú*

Full Stack Developer Path *2022 – 2023*
Platzi *Online*

Software Development *2025*
Coursera *Online*

Technical Skills

Languages:	Java, JavaScript, TypeScript, PHP, C/C++, C#, Python, SQL
Frameworks:	React, Next.js, NestJS, Spring Boot, ASP.NET, Express.js, Remix, Mantine
Databases:	PostgreSQL, MySQL, SQL Server, Oracle SQL, MongoDB, Supabase
DevOps & Cloud:	Docker, CI/CD, VPS, PM2, Vercel, cPanel, AWS (RDS), Namecheap, Cloudflare, Linux, Git/GitHub
Tools:	Postman, Jira, VS Code, Notion, Bizagi (BPMN)
Healthcare:	HL7 FHIR, HL7 v2, IPS, OpenMRS, HAPI FHIR, clinical data mapping
APIs & Integration:	REST APIs, GraphQL, Prisma, NextAuth, Cloudinary, PDF generation
Interface:	Tailwind CSS, shadcn/ui
Methodologies:	Scrum, agile development, technical audit, continuous deployment, version control, collaborative work, technical documentation

Languages

Spanish: Native

English: Upper-Intermediate (B2 – FCE Cambridge)
